

Power Lines, Pipes and Cables Ltd (PLPC Ltd) is committed to managing Environmental matters as an integral part of its business activities. We recognise that climate change is relevant to our business and are dedicated to integrating sustainable practices into our operations to reduce the effects of climate change.

We are committed to continually improve our environmental performance by identifying those aspects that we control and influence, assessing and, where possible, reduce their impacts. The company will achieve this and actively promote the principles of sustainable development through the following measures:

- Establish and implement an effective EnMS, with the information and resources needed to set and achieve appropriate environmental, energy and carbon reduction objectives and targets.
- Ensure compliance with legislative requirements, standards and codes of practice through the implementation of ISO 14001 and accreditations such as Achilles & NERS
- Implement and maintain appropriate systems and procedures to prevent activities or actions that pose a threat to the natural environment including energy emissions.
- Review environmental constraints and requirements for all projects and implement appropriate mitigation in line with PLPC policies and practices
- Implement and maintain appropriate systems and procedures to prevent activities or actions that pose a threat to or damage to the natural environment including energy wastage, including vehicle road users, generation of waste or have a negative impact on the quality of goods and services provided to our customers.
- Reduce where practical, emissions to the environment through a programme of waste recycling and where possible and reducing energy usage across all business areas
- Ensure that systems for identifying, assessing, eliminating and controlling risks to the environment and the business may be exposed are established, implemented and adhered to.
- Strive to ensure that our operations minimise energy usage, waste and prevent emissions or pollution that may cause harm to persons or the environment.
- Evaluate and select suppliers of goods and services based on their ability to assist us in achieving our environmental objectives set out in this policy.
- Adopt a sustainable sourcing Purchasing Policy including using energy performance as a factor in procurement decisions, value engineering solutions and in process and facility design.
- Review customers' environmental and climate change requirements and contract specifications in order to deliver a service that meets and exceeds the customers' environmental, carbon reduction and sustainability needs and expectations.
- Through consultation and participation, we will engage with our staff and contractors in developing suitable and appropriate environmental policies, procedures and engagement programmes and promote environmental awareness and responsibility.
- Strive to ensure that our operations minimise energy usage, waste and prevent emissions or pollution that may cause harm to persons or the environment.
- Manage fleet movements and fuel usage to promote a lean and clean fleet, ensuring continual improvement of fleet energy efficiency year on year.
- Pursue the continuous development and improvement of our EnMS through constant performance evaluation based around the setting of SMART objectives, which are measured through reactive and pro-active monitoring
- Implement appropriate policies and procedures to ensure that all employees and sub-contractors are competent to undertake their respective roles and receive appropriate training as required
